Safety Glasses

Special Tools

Volt-Ohm Meter

Installation Tools

Trim Removal Tool: Phillips Screwdriver

10-Mm Wrench

Drill Bits: 9.5Mm or 3/8" (for switch)

14 Mm Wrench

Soldering Tool

Soldering Tool

Soldering Tool

Soldering Tool

Special Chemicals

Conflicts

Note:

Legend

STOP: Damage to vehicle may occur. Do not proceed until process compliance has been met.

Operator Safety: Use caution to avoid risk of injury.

Critical Process: Proceed with caution to ensure a quality installation. These points will be audited on a completed vehicle installation.

General Process: This highlights specific processes to ensure a quality installation. These points will be audited during the accessory installation.

Tools & Equipment: This calls out the specific tools and equipment required for the process.

Revision Mark: This mark highlights a change in installation with respect to previous issue.

Warning: Do not use hand-held 2-way transceivers inside your vehicle while driving.

When transmitting from inside the car, 2-way radios that operate in the 25MHz-700MHz frequency range with more than 2.0 watts of power can produce electromagnetic interference that could interfere with the operation of cruise and throttle controls resulting in vehicle "limp mode".

Use of cellular phones will not interfere with these controls.

Due to sensitive nature of signals used for this product, all non-plug and play connections must be soldered. Failure to comply with this requirement will void warranty.
BEFORE INSTALLATION

To make the installation easier, the complete installation instructions should be read through before installation is started.

This installation instruction contains information how to install the Electronic Cruise Control which is not a Do-It-Yourself job.

Modern cars are equipped with electronics, which can be costly when damaged by inappropriate treatment.

Rostra Precision Controls cannot be held responsible for any error caused by wrong installation.

STOP - READ BEFORE INSTALLATION

IMPORTANT ADVISORY NOTES THAT YOU MUST FOLLOW

Always disconnect the negative cable from battery before installation.

Always use the enclosed installation instruction for installing the Electronic Cruise Control.

Check the part number of the cruise module label is the same compared to the part number of the installation instructions.

Be aware of radio codes that might have to be typed in.

Find a location to install the cruise module and control switch.

If any wires are left, then cut off and insulate.

Only use a multimeter to measure voltage.

Always drive the car for a complete test before reassembling the car.

All wire leads must be soldered.
**CHEVROLET TRAX 2012-**

**ELECTRONIC CRUISE CONTROL KIT**

**INSTALLATION**

- **10mm Wrench**
- **Negative Battery Cable**
- **Battery**

*NOTE: IF THE OBD2 INTERFACE CONNECTOR DOES NOT FIT, OR YOU DO NOT WANT TO USE THE PLUG CAP, CUT THE ROSTRA CONNECTOR OFF AND SOLDER WIRES: RED WIRE TO PIN 6, BLACK WIRE TO PIN 14 OF OBD2 CONNECTOR IN THE VEHICLE.*

**Connect to the accelerator pedal**

**To OBD2 Connector**

---

![Image of electrical components and wiring diagram related to cruise control installation.]
CHEVROLET TRAX POWER LOCATION IS IN THE IGNITION SWITCH HARNESS PIN POSITION 6 VIOLET/B.BLACK WIRE
1. Find a suitable position for the switch on the left hand side of the covering around the steering column.
2. Mark the position and drill a 3/8 hole.
3. Use the enclosed fittings so the switch is angled to match the OE turn signal switch lever.
4. The switch head can be rotated as desired, and locked with the supplied retainer clip.
5. Insert the wires in the connectors to plug into cruise module shown below.
Note: All accelerator pedal voltages shown are with the pedal fully depressed with ignition power.
