- Side camera
- User’s manual

**SPECIFICATIONS**
- Working Voltage: 12V DC
- Screen Size: 4.3 inch
- Screen Brightness: 1000 CD/m²

**DISPLAY OPERATION**
- Reverse Image
- Front
- Left or Right Lane

**REVERSE IMAGE**
1. The Reverse Camera input will always take priority over other cameras. When the vehicle is placed into reverse gear the camera image will automatically be shown on the mirror display. While reversing you may adjust the panel brightness to improve the comfort of the camera on the rear of the vehicle. Each press will increase the brightness, keep pressing to return to the factory setting.

**FRONT**
1. The front input can be controlled in 2 ways depending on the installation. 1: By pressing the center button on the monitor it will display the front view camera for 20 seconds and then return. 2: By using the trigger method the monitor will show the input as long as the trigger is active. Note: The rear camera for 20 seconds and then reset. 2: By using the trigger method the monitor will show the input as long as the trigger is active. Note: The rear camera for 20 seconds and then reset.

**LEFT OR RIGHT LANE**
1. The Blind Camera Input on the sides of the vehicle is triggered by the turn signals. When the driver signals to turn or change lanes the image will be shown on the mirror. (Blind Spot Cameras optional)

**AUTOMATIC NIGHT TIME SCREEN DIMMING**
1. In dark environments or at night the screen will automatically reduce the brightness level for better viewing. This level can be adjusted in the settings menu.

**REAR VIEW NIGHT TIME DIMMING FUNCTION**
1. The reverse camera will always override any input. When direct sunlight or headlamps shine into the mirror this may wash out the image. Note: Always use caution, do not force the mount. Rostra Precision is not responsible for any damage caused by improper installation.

**INSTALLATION**
- Mirror Installation.
- Mirror Installation.
- Mirror Installation.
- Mirror Installation.

**REMOVAL**
- Removing the original mirror.
- Removing the original mirror.
- Removing the original mirror.
- Removing the original mirror.

**MENU SETTING**
- Setting the menu using the “PICTURE”, “SYSTEM”, or exit button. When you enter either, press “L” to change among the options.

**DATA LOGGING**
- Data Logging.
How to Wire

The connector is equipped with adjustable guide lines that should be set correctly at the time of installation. Generally, these guidelines are used to help drivers navigate the distance from obstacles when parking. These lines have three positions: Reference, Yellow, and Green. These lines are displayed on the monitor when car is in reverse. The lines should be adjusted so the green line starts approximately 3 feet away from the rear of the car, the yellow line starts approximately 6 feet away, and the red line starts approximately 9 feet away. The lines should be adjusted to be approximately 6 inches wider than the vehicle on each side to assist in parking.

How to adjust the guide line

1. Place the vehicle in reverse gear and press the guideline adjustment key in the center of the directional keys at the remote control.
2. For the up, down, left, and right buttons to adjust the location of the guideline lines.
3. To adjust the angle of the guidelines, press旋转key to set the position to rotate clockwise or anticlockwise.
4. Press the button to choose the L or R adjustable guideline.
5. Use the up, down, left, and right buttons to adjust the location of the selected guideline.

Adjusting The Guidelines

By placing items behind the vehicle at the measurements shown above you will be able to easily and quickly customize the parking lines for this particular vehicle.

1. Once you have either marked the area or placed items such as traffic cones behind the vehicle, make sure the parking brake is engaged and no one is behind the vehicle.
2. The guidelines should be set so that the green line starts approximately 3 feet away from the rear of the car, the yellow line starts approximately 6 feet away, and the red line starts approximately 9 feet away.
3. The lines should be adjusted to be approximately 6 inches wider than the vehicle on each side to assist in parking.

NOTE: Only use a 1 amp fuse if replacement is needed.

WARNING

This Warranty does not cover the following:

- Defects in cosmetic, decorative or non-operational structural parts
- Defects in coloration, embossing, emblemation, material, age, decay, natural... 
- Failure of the remote control when used for adjustments or it may not respond.
