Technical Tip - ROSS new 2003 GM Full Size SUV's w/ factory keyless entry.

When installing a ROSS kit or Quick Install ROSS kit on a Full Size 03 GM SUV, the ROSS will be activated when unlock is activated with the keyless entry remote.

During unlock, the reverse lights come on to illuminate the rear of the vehicle. The problem is when the reverse lights are on the ROSS is also on. So if an object enters into the ROSS field of operation the ROSS will detect the object and the peizo will sound.

To turn off the ROSS, in this condition; the reverse lights will turn off when the ignition key is turned to "on" position. Or the ROSS will turn off when the keyless entry times out and turns the reverse lights off.

This is normal due to the operation of the factory keyless entry system. The ROSS is not defective and that the system is wired correctly.
