

SoftTouch Navigation System

Item Number 250-7610

Adding a navigation system to the General Motor's MyLink touch screen system has never been easier than with the *SoftTouch™ Navigation Interface System* from Rostra Precision Controls. The *SoftTouch™* system provides the most seamless and comprehensive aftermarket navigation solution without the hassle or cost of dealership re-programming, or the danger of software and firmware re-flashing.

When using a *SoftTouch™* navigation system by Rostra, a vehicle's audio system retains all of its original built-in functionality including the use of all factory touch screen options, factory radio controls, and the use of its OE backup camera (if equipped). Once a *SoftTouch™ Navigation Interface System* has been added to a vehicle, the driver has immediate access to premium mapping software from iGO primo® which includes turn-by-turn directions, over 6 million points of interest (POI), and 3D navigation functionality. And accessing the *SoftTouch™* system is as simple as pressing a button.

Features

Designed for use with GM MyLink systems.
See application notes below
Includes vehicle specific t-harness.
Features iGo Premium mapping software.
