

Did You Know...

Date: September 18, 2013 **Product Category:** Con-Verse *Bluetooth*® by Rostra

Did you know that the Con-Verse *Bluetooth*® Hands-free System by Rostra Precision Controls allows you to control *Siri* on your iPhone 4S 5, 5C, or 5S with iOS 7? Once paired, *Siri* will accept commands through the Con-Verse system's noise and echo canceling microphone and provide feedback over your vehicle's speakers. *Siri* can play and change music, read text messages, schedule appointments, and so much more, all seamlessly integrated with your vehicle's audio system.

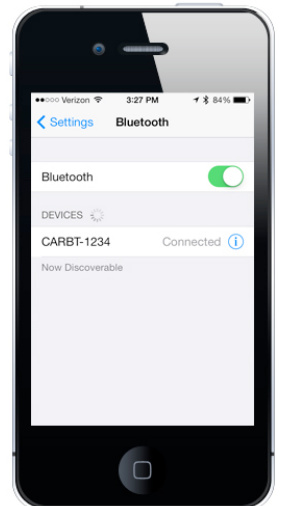

How does it work?

Begin by unlocking your iPhone and selecting the **Settings** icon from your phone's home screen. Once within the settings menu, select **Bluetooth** to view a listing of Bluetooth devices within range of your phone.

1

Pair your iPhone with your Con-Verse *Bluetooth*® system by tapping the **CARBT-1234** listing once the system is recognized. When prompted, enter the default system password of "1234" to complete the pairing.

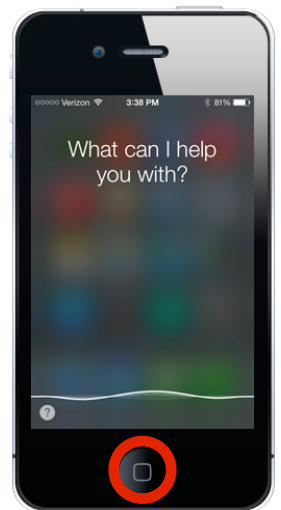

2

When your iPhone and Con-verse *Bluetooth*® system have been paired, simply press the phone button on your *Bluetooth*® control switch to activate *Siri* and to begin using voice commands while you drive.

3

Once you instruct *Siri* to play music, the iPhone is placed in media mode and you can use the Con-verse control switch to skip music tracks, increase or decrease volume, and answer phone calls. To command *Siri* again, simply hold the **Home** button on the iPhone until *Siri* is activated.
