Did you know that the Con-Verse Bluetooth® Hands-free System by Rostra Precision Controls allows you to control your iPhone 4 and 3GS as well as the 3rd and 4th generation iPod Touch with just your voice? Once paired, the device will accept commands through the Con-Verse system’s noise and echo canceling microphone and provide feedback over your vehicle’s speakers. The built-in voice control feature allows you to play and change music, read text messages, schedule appointments, and so much more, all seamlessly integrated with your vehicle’s audio system.

How does it work?

1. Begin by unlocking your device and selecting the Settings icon from your home screen. Once within the settings menu, select General and then Bluetooth to view a listing of Bluetooth devices within range of your iPhone or iPod Touch.

2. Pair your device with your Con-Verse Bluetooth® system by tapping the CARBT-1234 listing once the system is recognized. When prompted, enter the default system password of “1234” to complete the pairing.

3. When your iPhone or iPod Touch and Con-verse Bluetooth® system have been paired, simply press the phone button on your Bluetooth® control switch to activate voice control and to begin using voice commands while you drive.

4. Once you instruct the iPhone or iPod Touch to play music, the device is placed in media mode and you can use the Con-verse control switch to skip music tracks, increase or decrease volume, and answer phone calls. To use voice controls again, simply hold the Home button on the device until prompted.
