Green Loop - Cut to shut off parking lines

Tip: Camera must be powered off to effect image or parking lines.
Tape connections after cutting.

To re-activate the parking lines, re-connect the two green leads together.

Professional Installation Is Recommended.

This camera is designed to be mounted at the rear of the vehicle. Find a location that will not obstruct any equipment on your vehicle and will allow you to safely route the power/video cable into the vehicle.

All connections should be made inside the vehicle as the power and video connections are not waterproof.

Always check twice before drilling a hole to insure there is nothing behind the mounting location. Locate a safe position that will allow a complete view of behind the vehicle. Using the supplied Drill Bit or another 18.5mm bit, Drill the mounting hole. After drilling clean and debris or shavings away before inserting the camera into the hole.

Connect the RED power cable to the 12 Volt Positive wire from your White Reverse Lamp. Connect the Black power cable to a 12 Volt Ground (Example a screw or bolt). Depending on the vehicle you may be required to use a power relay or power from ACC depending on your type of installation.

Connect the video output (yellow) connection to the included extension cable and route the cable to the front of the vehicle. Connect this to your Monitor's rear view camera input.

NOTE: Specifications and components may change at any time. This manual is intended to be a general installation manual. If for any reason you are not comfortable with installing this product please seek qualified assistance. Damage to the product or vehicle is not covered under warranty or by Rostra Accessories Inc. in any way.
